

What to Expect

Early Bird: ₹2,999 · Limited Seats · IIT Alumni Centre Bengaluru

AI Agents: From Concept to Code

Developers

CS Students

AI Enthusiasts

6 Hour Workshop

About

Led by software engineering professionals with graduation from IIT Bombay in Computer Science and 15+ years of experience at Walmart Labs, Oracle, Amazon, VMware, and Broadcom. AI Agents are part of their daily work — this workshop comes from practical, hands-on experience, not theory.

Participants will go from zero to building a working AI coding agent in Python. There will be minimal lectures — most of the time is spent writing real code. If you enjoy building things and learning by doing rather than watching slides, this workshop is for you.

Topics covered

- What AI Agents are and how they differ from simple LLM calls
- Agent architecture: tools, memory, and the control loop
- Context engineering — managing tokens, models, cost, and safety
- Building a working AI coding agent from scratch in Python
- Hands-on coding with 4 progressive milestones

Not a good fit for

- Individuals looking for a high-level overview without coding
- Individuals without basic Python knowledge
- Individuals expecting a plug-and-play template they can copy-paste
- Individuals not willing to bring a laptop and code along

Early bird pricing: ₹2,999. Hosted at IIT Alumni Centre Bengaluru. Seats are limited.
